The
Huddersfield
Blueprint

Delivering for our future

New Street Public Realm Development

PROJECT TIMELINE

Walk this way.....

Paving has been finished outside the Post Office between Ramsden Street and Empower Gym, there are still barriers in place, but these are to stop delivery vehicles pulling up on the path ways.

We are currently working in the area between the Commercial Hotel and Merrie England. Most of the underground work is finished so we will now concentrate on finishing the work in this area before moving along the street.

Between the 9 and 15 May, Northern Powergrid (NPG) will begin works in the alley between Turntable Café and Studio 11 Hair Salon to connect the electrical supply. We will need to prepare the street so the cables can be laid to this point, we will need to lay a temporary finish in this area.

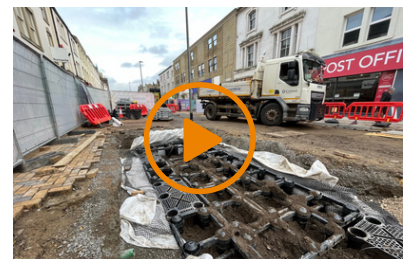

GREENING THE HIGHSTREET

We have installed the first planter outside the Commercial Hotel and will fill it with seasonal plants in the coming weeks. Although the planter has been installed, it will be several weeks before this is filled with soil and 'finished'. This is due to the seasonal growth of plants and the need for the planting to take place at certain times of the year.

The first stage of the underground infrastructure has also been installed using a the DeepRoot Silva Cell. What is this you ask? Well to us less technical folk it's all about water quality, water and pollutant control, and the minimal maintenance to help grow large thriving trees.

You can watch the video to find out more.

 deeproot

Giving New Street the green tree-tment it deserves will also have a number of benefits:

- Work towards cleaner air and will help to reduce pollution.
- Reduce the impact of heavy rainfall.
- Can help reduce stress and encourage people to spend more time outdoors.
- It will help to keep the town cool.
